

# Redsense Medical announces first Clamp System sale to UK clinic

**Halmstad, Sweden. February 26, 2026 – Redsense Medical AB (publ) (“Redsense” or “the Company”) announces that the Company’s UK distributor has received its first order for the Redsense Clamp System for delivery to an end customer in the UK.**

The order covers two Clamp Systems purchased together with Redsense Alarm units for immediate implementation at a UK clinic. The distributor aims to build on this initial implementation through ongoing discussions regarding broader adoption, with Redsense supporting the process.

“This initial order is an important milestone and the first Clamp System sale to an end customer, with the clamp delivered together with the Redsense Alarm for implementation,” says Sebastien Bollue, CEO of Redsense Medical AB.

## **ABOUT REDSENSE MEDICAL**

Redsense Medical is a corporate group with operations mainly in Europe and the United States. The company has developed the Redsense System, an innovation used for monitoring and alarm in the case of blood leakage in connection with a hemodialysis treatment. Redsense Medical solves one of the most serious remaining safety problems within hemodialysis – to quickly detect Venous Needle Dislodgement and catheter leakage to minimize blood leakage. The system consists of a patented fiber optic sensor, designed for either venous needle or central venous catheter, which is connected to an alarm unit. From the very start, the development of the company's technology has been based on the demands and safety requirements of healthcare providers in the dialysis sector. The Redsense Medical share is listed on Spotlight Stock Market (REDS)
