## **Clarification regarding the announcement of senior management changes at SciBase**

**STOCKHOLM, SWEDEN, — May 15, 2023 – SciBase Holding AB (“SciBase”) [STO:SCIB], a leading developer of augmented intelligence-based solutions for skin disorders hereby clarifies the May 15<sup>th</sup> announcement that Simon Grant will leave his position as CEO for personal reasons. Simon will transition out of his role over the next six months but will remain formally as CEO during this time. Simon Grant will also remain available to the Board in a consulting capacity after the end of the planned transition time.**

The Board has initiated the process to recruit a new CEO and will provide an update in due course. Tord Lendau, chairman of the board of SciBase, will take over certain operational parts of the role of CEO during the transition period as Simon Grant will gradually reduce his involvement. As chairman of the board, Tord is responsible for driving the process of finding a new CEO and will work to ensure a smooth transition.

“We thank Simon for his efforts as Managing Director at SciBase. During his nine years as CEO, SciBase has transitioned from being a research-oriented company to a commercial stage company with products approved and marketed in the US, Europe and Australia. Obtaining the PMA for Nevisense in the US in 2017 and being able to subsequently secure Medicare reimbursement earlier this year, was the culmination of Simon’s efforts to bring the company’s technologies to the market and to the benefit of patients worldwide. We wish Simon all the best in his future endeavors and it is positive that he will remain available to assist the board even after ending his role as CEO. I will step into an operational role and support the CEO to manage the transition as smoothly as possible. While it is disappointing to see Simon leave, we can also see this as an opportunity to optimize the organization as we leverage our platform to further accelerate our growth, especially in the US”, says Tord Lendau Chairman of the Board at SciBase.

The Company has made significant progress in navigating challenging regulatory processes and market environments and has reached profitability in Germany through growing sales of Nevisense and electrodes. SciBase has also recently made significant progress with Medicare reimbursement and market penetration in the US and Nevisense remains the only melanoma detection product available in the US. The foundation for further growth has been laid.

### **About SciBase and Nevisense**

*SciBase is a global medical technology company headquartered in Stockholm, Sweden, that has developed a unique point of care platform for the non-invasive detection of skin cancer and other skin conditions. SciBase is a pioneer within augmented intelligence, combining artificial intelligence with Electrical Impedance Spectroscopy (EIS) to provide objective information that assists dermatologists and others in clinical decision-making. SciBase's products include Nevisense and Nevisense Go and to date the platform addresses the areas of melanoma detection, non-melanoma skin cancer detection and skin barrier assessment. Nevisense is the only FDA-approved device for the detection of melanoma and the only MDR-approved technology for skin cancer detection in Europe. SciBase's technology is based on more than 20 years of academic research at the Karolinska Institute in Stockholm, Sweden. For more information please visit [www.scibase.com](http://www.scibase.com).
