Arrive at EPA in Brussels: Driving Smarter Mobility

Arrive, a leading mobility platform will take part in this year's EPA Conference in Brussels September 16–18. The event brings together key city leaders, policymakers, and industry associations, providing a platform for dialogue on the future of urban mobility.

Unlike many industry players who focus primarily on off-street solutions, Arrive offers a fully integrated mobility platform. With Europe's most widely used digital parking app, EasyPark, Arrive enables millions of drivers to move seamlessly through cities while supporting municipalities with smarter, data-driven decision-making.

"The EPA Conference is a valuable opportunity to connect with associations such as POLIS and with key European cities. We look forward to sharing how our expertise in data and technology can help shape more sustainable, accessible, and future-ready urban mobility ecosystems," says Morten Hoter Sørensen, Head of Distribution/Sales Europe, at Arrive and speaker in this year's conference.

With its focus on thought leadership and industry collaboration, the EPA Conference plays a key role in shaping the future direction of Europe's parking and mobility sector.

Arrive's participation underscores its commitment to leading the conversation around integrated mobility, technology-driven innovation, and collaboration with cities to create smarter, more livable urban spaces.

About Arrive

Arrive, including brands like EasyPark, Flowbird, RingGo, ParkMobile and Parkopedia, is a leading global mobility platform. Present in over 90 countries and 20,000 cities, the company helps people and decision-makers make smarter decisions about urban mobility and ease the experience of travel worldwide. Arrive delivers a unique combination of the core ingredients to make cities more livable: from smart payments and optimized car parks to data-driven traffic reduction and support for reinvestment in public transport and green space. It's about more than function, it's about saving time and simplifying the experience of travel for everyone. Travel is more than a journey, it's how you Arrive.
