

Alligator Bioscience and BioArctic enter into research agreement in the neurodegenerative field

Lund, Sweden, May 4, 2021 – Alligator Bioscience (Nasdaq Stockholm: ATORX) today announced that it has entered into a joint research agreement with BioArctic AB, a Swedish research-based biopharma company focusing on disease-modifying treatments and reliable biomarkers and diagnostics for neurodegenerative diseases, such as Alzheimer's disease and Parkinson's disease. Under the agreement, Alligator will employ its proprietary antibody generation technologies in collaboration with BioArctic to develop new product candidates.

“We are very pleased that BioArctic has recognized the power of Alligator’s proprietary phage display libraries which have been successfully used to generate Alligator’s suite of immuno-oncology programs. The application of this technology to the neurodegenerative field demonstrates the broad applicability of our powerful platform,” said Malin Carlsson, interim CEO of Alligator Bioscience.

“BioArctic’s focus is to develop new treatments to help patients with neurological diseases. We are looking forward to working together with Alligator, utilizing their phage display platform, in the development of new antibody therapeutic candidates with novel mechanisms of action,” said Johanna Fältling, Vice President and Head of Research at BioArctic.
