

## PRESS RELEASE

Lund, January 16th, 2026

### **Invitation to digital meeting focusing on novel strategies for treating bacterial infections without antibiotics**

**Welcome to Hamlet BioPharma's monthly digital meeting on January 21 at 12:00, held the same day as the Davos Summit discusses "The Fragile Future of Antibiotics. "**

As stated in the Davos Summit Program: "Antimicrobial resistance (AMR) is already undermining modern medicine. As superbugs evolve faster than new treatments can be developed, once-manageable infections are becoming harder to cure, threatening everything from surgery to cancer care. How can we ensure global access to life-saving antibiotics while preserving their effectiveness for generations to come?"

<https://www.weforum.org/meetings/world-economic-forum-annual-meeting-2026/programme>

**Our discussions will focus on the groundbreaking ongoing development in Hamlet BioPharma's novel strategies for treating bacterial infections without antibiotics. Results from a successful clinical study were recently accepted for publication in *Nature Microbiology*, a leading international journal in the field of infection.**
