Cleantech Invest increases its ownership in accelerating portfolio company Nocart

Cleantech Invest has increased its ownership by converting a loan in portfolio company Nocart. The ownership increased to approximately 21,5% from 20%.

Nocart delivers power management units for distributed and renewable energy generation. It enables the use of several different energy sources at high efficiency rate. Nocart's product can be used for electricity production from solar, wind and biomass, as well as small-scale hydroelectric generation. It is used both for connecting installations to the grid and for complete off-grid installations to become independent of the grid. Nocart is a system supplier whose deliveries combine technologies from also other companies.

The company has been able to grow profitably. Last year's revenues almost quadrupled to just less than 4 MEUR and during the first half of 2016 has signed orders of approximately 12,9 MEUR.

Alexander Lidgren, Managing Director at Cleantech Invest: "Distributed renewable electricity generation is growing explosively and Nocart has done an amazing breakthrough to this market. They have made over 60 deliveries and are showing a positive result throughout this growth."

Vesa Korhonen, Managing Director at Nocart: "Nocart's rapid growth continues in all fronts, we are opening new geographic markets, developing larger projects and working with larger financial institutions. Our project pipeline indicates continued sales growth."
