### **Bittium Exhibits Its Engineering Services for Embedded Systems at Bosch Connected World in Berlin**

**Oulu, Finland, May 14, 2019** – Bittium exhibits its engineering services and technology expertise for embedded systems at Bosch Connected World, on May 15-16, 2019 in Berlin, Germany. Bittium's extensive experience in advanced connectivity solutions, embedded devices and their software platforms, and information security enable the development of next generation's products and solutions for demanding environments. Bittium offers its services for all stages of product development; from technology consulting and concept strategy to turnkey product and service development.

"Bittium has a very strong background in developing devices and systems for highly demanding environments in compliance with quality management systems, and we believe that we are an excellent product development partner also for the automotive industry suppliers", says Jari Inget, Director of IoT Solutions at Bittium. "We have long experience in solutions for critical application areas, where the flawless functioning of devices is very important. Our goal is to help the automotive suppliers to create reliable, state-of-the-art automotive systems. We have comprehensive Android and Linux expertise thanks to Bittium's own Android-based devices and numerous customer projects, and we see a clear need for this kind of expertise in the development of new intelligent cars."

At the event we will showcase e.g. Android Automotive and Qt infotainment system demo. This demo and our other services will be available at stand S15. More information about our R&D Services is available on our website at: <https://www.bittium.com/rd-services> and <https://www.bittium.com/rd-services/automotive>.
