Press Release

Bittium SafeMove® software products come together as a unified portfolio to cover the entire lifecycle of secure mobile communications

Bittium Corporation press release on 3 June 2026, at 12:00 pm (CEST +1)

A fully controlled and secure platform for encrypted voice, video, and file sharing with device management and monitoring tools, built for defence forces, governments and critical infrastructure operators.

Bittium has consolidated its secure communications software into a single, unified portfolio under the Bittium SafeMove® brand. For governments, defence forces, and operators of critical infrastructure, the message is simple: all secure communications capabilities are now available from one trusted European provider, with no dependency on any third-party service.

Today, as communications sovereignty has become a strategic priority, organisations can no longer afford to rely on infrastructure they do not fully own or control. Bittium SafeMove® is built on exactly that principle.

The portfolio brings together four capabilities that cover the full lifecycle of secure mobile communications. **Bittium SafeMove® Mobile VPN** provides always-on, quantum-safe remote access, meaning it is protected not just against today's threats, but against the computing power of tomorrow. **Bittium SafeMove® Comms** delivers encrypted voice, video, messaging, and file sharing across platforms, with the customer in complete control of the infrastructure and no data passing through external servers. **Bittium SafeMove® EMM** handles device and application management across the entire fleet, and **Bittium SafeMove® Analytics** provides the full visibility and performance data organisations need to keep operations running without surprises.

All four work seamlessly across Android, iOS, Microsoft Windows, and Bittium's own Tough Mobile devices. An organisation does not need to standardise its hardware to secure its communications, Bittium SafeMove® meets users wherever they are.

"Customers choose Bittium because they need communications they can fully control and trust," says **Tommi Kangas, Senior Vice President of Bittium's Defence & Security business segment**. "Bittium SafeMove® brings our secure communications capabilities together as a complete solution that is simple to deploy, easy to manage, and built for long-term use in sovereign and regulated environments."

Bittium has spent decades earning the trust of governments and defence forces across Europe. Bittium SafeMove® is end-to-end secure communications platform purpose built for environments where confidentiality is not a feature, it is a requirement.

Bittium SafeMove® offers its users clarity. One portfolio, one provider, one set of standards, and complete sovereignty over every conversation.

Bittium Defence & Security

As a trusted supplier in the Defence & Security market with 40 years of experience in advanced radio communication technologies, we provide next-generation resilient and mobile tactical communications systems for defence forces and secure communication solutions for governments and authorities. Our products and systems for tactical communications bring broadband data and voice seamlessly to all troops across multi-domain operations. The offering is completed by mobile devices and cyber security solutions certified up to CONFIDENTIAL and NATO Restricted levels.

In addition to the products and systems supplied to the Defence & Security market, Bittium offers solutions focused on measuring and processing of biosignals as well as R&D services and wireless embedded solutions. Bittium's net sales in 2025 were EUR 119.3 million and operating profit EUR 19.4 million. Bittium is listed on Nasdaq Helsinki. www.bittium.com
