Talkpool gets breakthrough order for COVID-19 solution in Spain

Redytel IoT orders 140.000 EUR worth of LoRaWAN CO_2 sensors from Talkpool. The IoT sensors will be installed during Q1 2021 in public buildings in Spain to monitor the ventilation and provide insights into CO_2 levels to the public.

CO_2 levels give a strong indication of air quality status, as it is a residue from human breath. In crowded or not well-ventilated indoor spaces, CO_2 levels can rise and this indicates that you're essentially partially breathing in the air that another person exhaled. This increases the risk of COVID-19 spread. The CO_2 values are measured by Talkpool's wireless sensors and sent to the cloud. The data is made accessible to the public by the placement of a QR code next to the device, which gives access to a dashboard upon being scanned.

"We are excited to support our Spanish partner Redytel IoT with our industry leading CO_2 sensors. It is everybody's top priority to minimize the spread of COVID-19 and it's fantastic to see our technology make an impact.", says Boris de Bruin, Marketing and Sales at Talkpool.

 "Talkpool's wireless CO_2 sensors are the best LoRaWAN sensor on the market for COVID-19 CO_2 monitoring. Their focus on quality and security makes the devices very reliable and suitable for large scale rollouts. On top of that, we were convinced by the adaptive data reporting functionality, which kicks in instantly when CO_2 levels pass problematic threshold values.", says Oscar Cela Cobo, Director at Redytel IoT.

The project has been widely covered on Spanish national television, some clips of this can be found on Redytel IoT's homepage: https://redyteliot.info/prensa/. This is a groundbreaking solution and a breakthrough order for Talkpool, with a good possibility of follow-up orders coming in in 2021.
