GomSpace, HEMERIA and CS Group signs MoU

GomSpace has recently signed a Memorandum of Understanding (MoU) with HEMERIA, a leading French Space player present at the heart of national Small Sat ecosystem that designs, builds and supplies cutting edge space systems, and CS Group, a company that designs, develops, deploys, maintains and operates critical systems for Aeronautics, Transports, Space and Defense. Through this MoU, GomSpace, HEMERIA and CS Group are voluntarily creating a partnership framework aiming at demonstrating the potential in joining forces to develop solutions building on expertise of each party.

Partnerships and cooperations are identified by our companies as key levers to strengthen SmallSat industries relevance and value proposition development towards customers while being active actors of the European Space sovereignty political strategy.

In addition, such frame is aiming at safeguarding the highly efficient and instrumental economical equation of NewSpace by avoiding unnecessary duplication of competencies, expertise and infrastructures.

"We are very happy to sign the MoU with HEMERIA and CS Group. Beyond the business aspect, this partnership is fully in line with the development of a stronger and more integrated European NewSpace ecosystem. With this MoU, GomSpace is developing further its presence in France and its cooperation with the French space industry, aiming at generating value for customers while strengthening European Space sovereignty" said Niels Buus, CEO at GomSpace.

Nicolas Multan, CEO at HEMERIA added: *"I am delighted that HEMERIA can explore new opportunities in Europe with GomSpace and CS Group. This partnership agreement will allow us to consolidate our position in the field of SmallSats and to stimulate the Franco-Danish NewSpace"*

Nicolas Frouvelle, CS Group Head of NewSpace Business Development complemented with: *"for CS Group, the signature of this MoU is a real opportunity to further collaborate with European NewSpace Industry and to consolidate our position as one of the European leaders in ground segment and operations software for small satellites and constellations"*.
