About GARD™

GARD consists of a group of tests for analyzing chemicals' ability to start an allergic reaction in humans. The tests are performed on human cells in test tubes (in vitro) in combination with artificial intelligence. By analyzing hundreds of markers, GARD generates large amounts of data and delivers results with over 90 percent accuracy. This can be compared to today's standard method – tests on animals – which only achieves 70-75 percent accuracy. The product portfolio consists of tests for skin and respiratory allergy: GARD™skin, GARD™air, GARD™potency and GARD™skin Medical Device.

About SenzaGen AB (publ)

SenzaGen's technology enables replacement of animal experiments with genetic testing in test tubes for determining the allergenicity of the chemicals we come into contact with in our daily lives, such as those in cosmetics, pharmaceuticals, food products and dyes. The company's patented tests are the most reliable on the market and provide more information than traditional evaluation methods. SenzaGen sells direct in Sweden and the US, and through partners in several other countries. Over the next few years the company will grow geographically, make alliances with additional distribution and
