

Episurf Medical takes the next step in partnership regarding its AI-based imaging technology

Episurf Medical (NASDAQ: EPIS B), a pioneer and leader in individualised technologies for painful joint injuries, today announces that it has entered into an agreement with a US-based orthopaedic company. This company will have exclusive rights to use Episurf Medical's AI-based medical imaging technology for allograft products in North America and the UK. This agreement follows a Letter of Intent, in which the two companies announced that they had entered into in July 2019. The agreement covers an initial evaluation period during which the potential use of Episurf Medical's proprietary AI-based imaging technology for surgical planning and optimisation of allograft-related products will be evaluated. The details and financial considerations remain confidential but entering into this specific industry implies a revenue potential for Episurf Medical within the field of imaging.

"We are very happy to take the next step in this partnership, following the letter of intent earlier in July. We are proud of the capabilities of our proprietary imaging technology, and we look forward to applying it in the allograft industry" says Pål Ryfors, CEO Episurf Medical.
