

FlexQube among the winners in Robotics Innovation Award 2022

FlexQube has, as the only Swedish company, been listed as a winner in the Robotics Innovation Award 2022, announced by WTW Media, for the new eQart® Navigator concept. FlexQube was awarded within the Technology, Products and Services Innovation category where the criteria was: *“New commercial solutions that have the potential to positively impact markets or the whole robotics sector.”*

Among other winners this year were companies like Nvidia, John Deere, GreyOrange and Berkshire Grey.

Mike Oitzman, editor for the Robot Report comments on the eQart® Navigator: *“This solution is novel because the eQart® Navigator powers the motors onboard each eQart® while driving the eQart® between pickup and drop-off locations. This improves the efficiency of the entire material handling process.”*

CEO Anders Fogelberg comments: *“Our transformation to become a recognized robotics company is currently ongoing and within the last year we have taken major steps towards that goal, including the Amazon project and the recent eQart® Line orders. To be awarded in the RBR50 Robotics Innovation Award together with the very prominent names that are in there, definitively strengthens our brand when it comes to robotics and automation.”*

About WTW Media LLC

[WTWH Media](#) LLC is an integrated media company serving engineering, business, and investment professionals through more than 50 Web sites, five print publications, and many other technical and business events. The “WTWH Network” includes [The Robot Report](#), [Collaborative Robotics Trends](#), [Mobile Robot Guide](#) and [Robotics Business Review](#), online technical, business, and investment news and information portals focused on robotics and intelligent systems. WTW Media also produces leading in-person robotics conferences, including the [Robotics Summit & Expo](#), [RoboBusiness Conference & Expo](#), and the [Healthcare Robotics Engineering Forum](#).
