

Ipsen relocates its Nordic headquarters to Hagastaden, at the heart of the future life science cluster

5 JUNE 2026 – Ipsen today announced the relocation of its Nordic headquarters from Kista to Hagastaden, one of Stockholm’s most dynamic life science hubs. This move marks an important step in Ipsen’s Nordic growth journey and reflects the company’s ambition to be closer to one of Europe’s most advanced life science ecosystems, while strengthening collaboration across research, healthcare and innovation.

By establishing its Nordic headquarters in Hagastaden, Ipsen joins a vibrant community shaping the future of life sciences. The relocation is fully aligned with the company’s commitment to remain at the forefront of science, fostering innovation, and enhancing partnerships – all with the goal of delivering value for patients.

“Moving to Hagastaden brings us closer to leading research institutions, clinical expertise, and key partners. It creates new opportunities for collaboration and strengthens our ability to develop treatments that make a real difference for patients,” says Julien Dagher, General Manager Nordics & Baltics, Ipsen. “For us, this is more than a new workplace – it is about becoming part of an environment where ideas are shared, partnerships are built, and innovation can thrive,” he added.

Strengthening collaboration and innovation

Ipsen’s new office will be designed as a modern, flexible workplace that encourages collaboration both internally and with external partners. Its close proximity to Forskaren, the Karolinska Institute and Karolinska University Hospital will further enhance opportunities for dialogue, knowledge exchange and partnership.

Through this strategic relocation, Ipsen reinforces its long-term commitment to the Nordic region and strengthens its role in shaping the future of life sciences in the region.

About Ipsen

We are a global biopharmaceutical company with a focus on bringing transformative medicines to patients in three therapeutic areas: Oncology, Rare Disease and Neuroscience. Our pipeline is fueled by internal and external innovation and supported by nearly 100 years of development experience. Our teams in more than 40 countries and our partnerships around the world enable us to bring medicines to patients in more than 100 countries.
