CELLINKs BIO X 3D-Bioprinter has been awarded the Red Dot Award for product design. The prestigious Red Dot Award is an international design competition where products are judged in different categories by industry leading designers, this year products from 59 countries participated.

The 3D-Bioprinter BIO X was launched 2017 and is designed to be truly user friendly while providing cutting edge technology.

"Getting awarded the Red Dot Award is a quality stamp that shows that designing a product in collaboration with your customer and putting their needs in the center to reach their expectations pays off. This has truly been the product of hard work from our team of hardware, software and tissue engineers. We are truly honored to get awarded the Red Dot Award!" – Dr. Hector Martinez, CTO, CELLINK

About CELLINK

CELLINK has created one of the world's first universal Bioinks, today used by many of the world's most well-reputed research institutions. A Bioink can be mixed with living cells to print functional human tissues and if future research is successful, eventually, complete human organs in so-called 3D-Bioprinters. CELLINK's universal Bioink shows excellent results and can be used in both CELLINK's proprietary 3D Bioprinters and in 3D Bioprinters developed by other operators. Mangold Fondkommission AB, tel: +46 (0) 8 5030 1550, is the Company's Certified Adviser.
