

CELLINK has been granted a patent for "3D printer and a method for 3D printing of a construct" from the Swedish Patent office

CELLINK has been granted a patent for a method for printing tissue constructions with a 3D printer. Patent protection applies to the Swedish market, the company also conducts the process of expanding patent protection in additional countries.

The patent protection from the Swedish Patent and Registration Office shows uniqueness and height of innovation. The patent includes a method that enables advanced calibration and printing of designs with high demands on precision and reproducibility.

"We are pleased to have this patent granted, which is proof that we work strongly with innovative technologies and to protect our products and our technologies. This helps us build a long-term business with the right focus and value for customers and shareholders." - Erik Gatenholm, CEO

The granted patent strengthens the company's protection for intellectual properties and is in line with the company's strategy. The company is in a phase where great focus is on the development of innovative solutions to enable printing of various tissues and organs.
