CELLINK to bring Livecyte high content live cell imager to a wider audience

Today, CELLINK and Phasefocus announced a partnership to bring Livecyte, a high content live cell imager, to a wider market. Live cell imaging is essential to answering some of the most pressing questions in the life sciences, but conventional methods often involve labeling cells, a potentially harmful process that can alter research outcomes. Livecyte's integration of the patented label-free Quantitative Phase Imaging technology with state-of-the-art automatic cell tracking algorithms enables users to automatically characterize growth, morphology and motility of large populations of cells in a 96-well plate assay format. Combining CELLINK's already extensive product portfolio of bioprinters, liquid handlers and bioinks with Livecyte offers researchers a unique opportunity to improve workflow efficiencies in application areas such as drug discovery, regenerative medicine and cell-based assays.

"We have taken an important step to better serve our customer base by adding the groundbreaking Livecyte to our growing live cell imaging portfolio," says Paul Berning, Head of Global Sales at CELLINK. "With the CELLCYTE X and Phasefocus's high content live cell imager, our collaborators enjoy an uninterrupted workflow while pushing the boundaries of their work even further."

Phasefocus CEO Martin Humphry adds, "We are very excited to be working with the talented team at CELLINK. Their complementary product portfolio and vision is a natural fit with Phasefocus. The partnership will help us reach a much wider customer base and bring the unique capabilities of Livecyte to a new audience."

About CELLINK

CELLINK is the leading bio-convergence company and a global provider of technologies, products and services to create, understand and master biology. With a focus on the areas of bioprinting, biosciences and industrial solutions, the company develops and markets innovative technologies that enable researchers in the life sciences to culture cells in 3D, perform high-throughput drug screening and print human tissues and organs for the medical, pharmaceutical and cosmetic industries. CELLINK's products are trusted by more than 1,800 laboratories, including ones at all the top 20 pharmaceutical companies, are being used in more than 60 countries, and have been cited in more than 700 publications. CELLINK is creating the future of medicine.

About Phasefocus

Phasefocus is changing what is possible in live cell assays, helping scientists uncover subtle differences in cell behaviour across whole cell populations. The company's products are based on a patented and award-winning computational imaging technology, called ptychography. From automated characterisation of live cell behaviour, to world-record-setting electron microscopy, Phasefocus is enabling advances in many diverse areas of scientific research.

Livecyte, Phasefocus's flagship product, delivers an unprecedented level of single-cell data from live cells. High-contrast label-free imaging, correlative fluorescence and powerful automated image analysis algorithms result in high-content time-lapse outputs from standard 96-well plate assays.
