

Latest technology from Svenska Aerogel Holding AB (publ) - adding customer value

Being an innovative company, Svenska Aerogel is constantly seeking for improvements, new technology and new applications. The latest technology that has been added to the plant in Gävle is a direct response to customer demands. This flash dryer from Hosokawa Micron enables Svenska Aerogel to deliver Quartzene with optimized quality and extended custom features.

Quartzene used as an additive must meet increasingly high demands in terms of quality, function and handling. This new technology for drying Quartzene has been tested and implemented together with a globally active manufacturer, Hosokawa Mikron.

The technology makes it possible to control the particle size in a repeatable way, which creates conditions for customers to increase the amount of Quartzene in the solution for better performance and at the same time get a more efficient mixture. The material dusts less, which is important both for the working environment at Svenska Aerogel and in the customers' manufacturing processes. The choice of a global supplier is strategic for future expansion of manufacturing modules in relevant markets.

This technology solution will be presented to customers from this autumn and production manager Nestor Wallberg is very pleased with this installation in the factory:

- This technology creates added value for our customers. We now have the possibility to improve quality and meet specific customer requirements at a new level.
