

Glycorex Transplantation (GTAB B): Signs distribution agreement in Argentina for Glycosorb® ABO

As part of its continued international growth strategy, Glycorex Transplantation AB (publ) has entered into a distribution agreement with Buenos Aires-based Stone Fly Salud SA for the rights to Glycosorb® ABO (CE-marked) in Argentina.

Stone Fly Salud SA specializes in the distribution of pharmaceuticals and medical products, having operated in the Argentine market since 2006. The company works closely with local healthcare providers to supply critical medical technologies across the region.

The agreement opens a significant market opportunity for Glycorex, as Argentina performs approximately 1,600 kidney transplants annually across more than 60 specialized centers.

"We are pleased to finalize this agreement and look forward to working alongside the Stone Fly Salud team," says Carl Magnus Schultz CEO at Glycorex Transplantation. "Together, we will make Glycosorb® ABO products accessible for ABO-incompatible transplantations and transfusion medicine applications throughout Argentina."

Brief information about the company

Glycorex Transplantation AB (publ) is a global medical technology company headquartered in Sweden. The company has developed a unique medical technology (antigen-specific immunoadsorption) to specifically reduce blood group and autoantibodies in the blood. The company's focus areas are within transplantation, blood transfusion, and autoimmune diseases. The company has sales in over 30 countries, with Europe as its largest market. Sales take place through own sales channels and in cooperation with distributors in selected markets. Product development and production takes place in the company's own facility in Lund, Sweden.

Glycosorb® ABO is one of the company's self-developed proprietary medical devices that is used to facilitate blood group-incompatible transplantation by specifically reducing anti-A/B antibodies in the organ recipient's plasma. Whilst primarily used to facilitate blood group incompatible kidney transplants, Glycosorb® ABO is also used in blood group incompatible liver-, heart-, lung-, and stem cell transplants. More than 60 scientific publications have been published in reputable medical journals, showing excellent short- and long-term outcomes of blood group incompatible transplants performed with Glycosorb® ABO. Glycosorb® ABO has

been used in more than 8,000 transplants in over 30 countries.

The company has also developed and CE-marked a medical device variant of Glycosorb® ABO that targets a different customer segment: transfusion clinics and blood centers. The product can help increase the availability of universal blood components and has been shown to be effective for the preparation of low-titer blood plasma, whole blood, and platelet concentrate.

The company is collaborating with a leading European research institute to develop a product for the treatment of the autoimmune disease rheumatoid arthritis.

Glycorex Transplantation AB (publ) is listed on NGM Main Regulated Equity (Nordic Growth Market) and is traded under the symbol GTAB B.
