ÅF acquires Facilia – a specialist in nuclear waste management and decommissioning

The acquisition of Facilia strengthens ÅF's offering within safety assessment for nuclear waste management and decommissioning. With the acquisition ÅF is well positioned for further growth and to support the shifting energy market.

Facilia is active in the fields of environmental and health risk assessments, safety assessments in radioactive waste management and radiation protection.

The acquisition will strengthen and broaden ÅF's offer of services and products in the nuclear waste management and decommissioning segments. A combination of ÅF and Facilia will form a strong nuclear partner in Scandinavia and Europe. With Facilia's international references, clients and partners in Europe ÅF's international nuclear business will grow faster.

"Together with Facilia we are well positioned to support the shift in the market where the demand for nuclear energy has changed focus to services within maintenance, decommissioning and waste management. Facilia perfectly complements our service portfolio and adds interesting products and e-learning tools that will be of great value for our customers, commented Jonas Gustavsson, President and CEO.

"This is a great opportunity for us to continue developing our services and further commercializing our products to the benefits of our customers. We have well-established customer relations and highly skilled employees and together with ÅF we have the ability increase the value of our services," said Rodolfo Avila, CEO of Facilia.

Facilia has in total 14 employees and net sales of SEK 18.5 million in 2017 and will be consolidated into ÅF as of June 1 2018.
