Press Release from AFRY

AFRY awarded new framework agreement with Regional Health Authority in Norway

Advansia, part of AFRY, has secured a new framework agreement with The South-Eastern Norway Regional Health Authority for project management services and will support the execution of the largest hospital projects in the region.

The South-Eastern Norway Regional Health Authority is the largest of Norway's four regional health authorities. It delivers specialist healthcare services to 3.1 million people across 11 counties, which is about 60 percent of the nation's population.

The new framework agreement includes major hospital projects such as the New Aker Hospital and the New Rikshospitalet. It also includes other hospital projects initiated by the health authority or its affiliated health trusts. The agreement further strengthens Advansia's strong foothold in Norway's hospital sector, with a proven track record of involvement in all key hospital development projects in the region. This includes the new Drammen Hospital, which celebrated its official opening this October.

Jørn Dreyer, Area Manager at Advansia, part of AFRY, is pleased to continue the strong collaboration with the client: "Through our holistic approach, we contribute with our competence across every phase of the projects, from early planning to completion, and further into the operational phase."

The agreement has a duration of two years, with the possibility of a four-year extension. Order value for AFRY is not disclosed. In total, four companies have been awarded the framework agreement, and the total estimated value of all agreements is approximately 1.9 billion SEK.
