

## InCoax signs ODM agreement to strengthen production capacity and broaden modem portfolio

To secure the supply of in:xtnd™ Access modems and easily ramp up production according to sales plan, InCoax signs agreement with a new ODM (Original Design Manufacturer). The new modems will be introduced at the Broadband World Forum (BBWF) in Amsterdam.

InCoax is facing a situation when the demand for products will increase significantly over a short period of time. To be able to quickly and cost-efficiently ramp up the production and secure the supply of products, an agreement has been signed with a well-established ODM, capable of scaling up the production with short notice. All current and future product designs and other assets will be the exclusive property of InCoax.

The first products of this cooperation will be shown at the BBWF in Amsterdam on October 15-17. The new in:xtnd Access modems have been optimized on a number of characteristics, with an increased link budget capacity being the most prominent one. The modems will be available in a one and a two ethernet port versions. The BBWF is one of Europe's most important events for customers and suppliers of broadband infrastructure and services. The BBWF event attracts more than 4,000 key customer executives. All new in:xtnd products are CE and FCC listed to cover key focus markets such as Europe and North America. To learn more visit us at BBWF (J30) in Amsterdam or contact us at [sales@incoax.com](mailto:sales@incoax.com).

*"This agreement secures a steady supply of high quality products in line with expected market penetration of the in:xtnd product line. Our manufacturing must be agile and able to swiftly ramp up production following the expected rise in market demand. A stable product supply is an essential platform for our future global market expansion" says Peter Carlsson, Chief Executive Officer at InCoax.*

### About in:xtnd

*In:xtnd is **EASY** to install as it uses the existing coax cable infrastructure for fiber access extension. Its plug-in Access modems allows for tenant's self installment. It may be rolled out in stages and ensures minimal operational disturbances. In:xtnd is **FAST**, allowing 2.5 Gbps data traffic on each channel, almost as fast upstream as downstream (symmetrical). Using existing cable infrastructure makes in:xtnd the **SMART** and environmentally friendly choice.*

*Fast and easy deployment allows for higher subscriber uptake with short time to revenue.*

### About InCoax Networks AB

*InCoax Networks AB (publ) is innovating the future of broadband access. In:xtnd™ provides the next-generation smart and sustainable networking solutions to the world's leading telecom and broadband service providers.
