

## InCoax launches new products for the growing XGS-PON market

**The new D2501 MoCA Access™ DPU will be launched commercially in September 2021. A pre-launch is being made during the Fiberconnect event 25-28 July 2021 in Nashville, US presented by our partner Technetix. Operators has been deploying GPON and are now moving over to symmetrical XGS-PON. The D2501 provides an excellent solution to offer Fiber Access Extension into Multi Dwelling Units (MDU) in XGS-PON Networks.**

The current InCoax MoCA Access 2.5 in:xntd platform is a cost-effective and fast way compared to Fiber/LAN cabling to execute the fiber deployment strategy in Multi-Dwellings Units (MDUs) all the way to the consumer. Implementing the new InCoax Fiber Access Extension solution accelerates number of target deployments because majority of operators are using PON (Passive Optical Networks) and shortens the time to increased revenue for the operator.

InCoax D2501 allows service providers to realize Gigabit symmetrical broadband speeds over existing coaxial infrastructure. It rapidly enables high speed communications and entertainment services to subscribers and provides IPTV services and can also co-exist with legacy TV services during a phase over period for faster adoption of ALL-IP services. D2501 have new software implementation following the Broadband Forum TR-419 specification for integration to existing network management systems.

*“This new product will be a great complement to the existing portfolio of Controllers offered by InCoax. It increases the target market by supporting several fiber up-link options as XGS-PON, XG-PON, GPON, Active Optical Networks with 1/2.5/10 Gigabit northbound link speed. The D2501 also offers several advanced management options such as NETCONF/YANG or TR-069”* says Helge Tiainen, Head of Product Management, Marketing & Sales, InCoax Networks
