

InCoax wins additional order of 3.2 MSEK from the US-based Tier-1 operator

InCoax has received additional orders from the US-based Tier-1 carrier for InCoax's gigabit home network product line based on the MoCA Home™ networking standard. The order amounts to 324,000 USD (appr. 3.2 MSEK) and will be delivered and invoiced during the fourth quarter of 2025.

The US-based Tier-1 operator continues its roll-out of InCoax's Home system. The operator has continuously installed the equipment and is now in need of an increased number of units. The solution addresses a use case for private single-family homes where the operator has a need to continuously replace an older existing system in single-family homes over a three- to five-year period.

About InCoax Networks AB

InCoax Networks AB (publ) is reusing existing property coaxial networks for broadband access in Fiber-To-The-Home (FTTH) deployments for Communication Service Providers (CSP) globally. The technology is a high performance, future proof, reliable and cost-effective complement to fiber, that reduces installation time and improves take-up rate, to boost digital inclusion and Internet access for all.
