

Press release

H&D Wireless selected by Skanska to increase security in the construction industry using the Internet of Things

Stockholm – 13th December 2018. Every year about 7-8 people die in Sweden in work related accidents, while the number of occupational accidents reported is around 3,500. Some of the most common accidents are injuries from tools and machines, body movement with physical overload, fall from height and stay in hazardous areas with dust, noise and vibration. H&D Wireless, Skanska and Microsoft Sweden are collaborators in a development project for increased security in the construction industry with the support of digitization.

Skanska has a zero vision for injuries and ill health at work and strives to be a role model in Swedish business. The purpose of phase 1 of the project is to identify and evaluate available technology and analysis models. The objective is to find optimal opportunities for a new industry standard. The project is part-financed by SBUF – “Svenska Building construction Development Fund

- Skanska believes in H&D Wireless and we value their expertise in positioning, communication and IoT security solutions. Today, there is no standard in the construction industry, such as handling event data and systems that can warn in real-time and thus help the individual in ongoing danger. H&D Wireless is very solution-oriented, and the goal is that the results of the project will benefit the entire construction industry, says Timo Rajasaari, Skanska Health & Safety Project Manager
- "We are very pleased with Skanska's confidence in us, and through this we have the opportunity to further develop and demonstrate the value of IoT systems and services that can be offered to the entire construction industry," says Pär Bergsten, CEO of H & D Wireless.

According to the latest SCB measurements, Building and Construction is a profession with over 100,000 companies, which accounts for almost SEK 700 billion and with approximately 300,000 employed only in Sweden. Construction work in Sweden has an international character with a large number of foreign labor. An industry standard is therefore highly sought after, especially in Sweden and the rest of the Nordic countries.
