

## **PRESS RELEASE**

**Published:** 07-05-2019

### **Inhalation Sciences receives new order worth 1.6 MSEK from major customer in inhalation arena**

(Stockholm May 7, 2019) **Inhalation Sciences (ISAB) has received an order for a PreciseInhale® system, including the platform's unique integrated inhaler actuator, from an existing customer within the inhalation arena. The order is worth approx. 1.6 million SEK.**

PreciseInhale and its range of modules for controlled exposures to aerosols is a comprehensive solution for companies studying inhalation and aerosols in pre-clinical experiments. Of particular interest to the inhaled drug development industry is the system's ability to generate aerosols from existing and new inhalers. PreciseInhale includes an integrated, software-controlled, automated module that can connect to and generate aerosols from any type of inhaler on the market.

"It's a sure sign of just how strong our system is when a customer invests in another instrument. This sale is a clear indication that users realize the importance of the PreciseInhale technology we deliver, and that they are willing to expand their investment in it," says CEO Lena Heffler.
