

## PRESS RELEASE

Published: 29-10-2021

### **Inhalation Sciences receives new order worth 2.9 million SEK from returning big pharma customer**

(Stockholm, 29 October, 2021) Inhalation Sciences (ISAB) has signed one of the largest purchase orders in its history with a major global pharmaceutical company. The client has previously carried out two extensive clinical research projects with Inhalation Research Services (IRS). The order is for ISAB's aerosol R&D system *PreciseInhale*® and its *in vitro* lung simulation module *DissolvIt*®.

The total value of the order is 299,400 KEUR (2.97 million SEK). The order follows lengthy negotiations and previous successful contract research projects for the company carried out by Inhalation Research Services.

CEO Manoush Masarrat: "This is a major milestone that validates our technology *and* our business model. The successful IRS research projects provided our client with such a strong technical and scientific proof of concept that the advantages of having the systems in-house - and being able to generate these kinds of results in-house - were decisive. Our technology proved itself every step of the way and we look forward to continuing our ongoing collaboration with this highly valued customer."

*DissolvIt*® is widely recognized as being a leading solution in the field of high-precision, predictive *in vitro in vivo* correlation (IVIC) data, reducing risk and identifying strong drug candidates very early in the development process – a major competitive advantage for inhaled drug developers.

#### **About Inhalations Sciences Sweden AB (publ)**

Inhalation Sciences Sweden AB (publ) develops and commercializes world-leading instruments and services for research into inhalation. The company's patented lab instruments *PreciseInhale*® and *DissolvIt*® enable researchers in the pharma industry to make drug pipeline decisions at an early stage, saving time and resources for R&D departments, and enables researchers in academic institutions to define how aerosols and small particles impact our lungs, and so our health, when being inhaled.
