

Malmegårds selects Netmore LoRaWAN for seamless property digitization transition from Sigfox

Malmegårds, a privately-owned Swedish property owner, is working with Netmore to facilitate a comprehensive upgrade to a more sustainable and open digital infrastructure based on Netmore LoRaWAN. This transition involves replacing old Sigfox meters and sensors with new models designed to interface with Netmore's professional, long-term focused LoRaWAN services. This new digital environment will provide capabilities for monitoring temperature, humidity and Indoor Air Quality (IAQ), optimizing energy usage and indoor climate for tenants.

System transition: Seamless replacement of Sigfox sensors to LoRaWAN

With the prevailing uncertainty regarding Sigfox's future, Malmegårds has chosen to adopt LoRaWAN technology, seamlessly replacing all 1000 temperature and humidity sensors with their new, LoRaWAN-enabled sensors, used to optimize HVAC through Leanheat.

Strategic commitment to sustainability and enhanced indoor climate with open digital infrastructure

Leveraging Netmore's open digital LoRaWAN infrastructure, Malmegårds plans to enhance sustainability efforts and indoor climate control. This strategic move will not only support the energy savings and improvement of indoor air quality via integration with BMS and Scada systems, but also support the company's goal of climate neutrality by 2030 and carbon debt offset by 2035.

Netmore Group CEO Ove Anebygd states, "Partnering with Malmegårds during this significant transition exemplifies the versatility and sustainability potential of our LoRaWAN solution. We believe our collaboration will serve as a compelling case study for others considering similar technology upgrades."

Malmegårds CTO Mikael Juhlin adds, "Transitioning to Netmore's LoRaWAN technology aligns with our sustainability targets and our commitment to improving the tenant experience. The process has been seamless, and the capability to harness data across multiple applications to optimize our properties is a game-changer. We feel assured that Netmore and LoRaWAN will provide a future proof technology and partnership"
