

Enrad BV gains commercial traction in the Netherlands through strategic partner OSH

Enrad BV has secured several orders through its Dutch partner and distributor OSH, with a combined order value exceeding EUR 400,000. The projects cover installations at Schiphol The Base A+B, Priva Headquarters and Oranjestad Alkmaar, and represent an important step in Enrad's establishment in the Dutch market.

CEO Andreas Bäckäng comments:

- These orders mark an important step in the execution of our long-term strategy for the Dutch market. We knew that building a strong position in the B2B segment would require patience, with a typical lead time of 18-24 months before generating recurring business. The development we are now seeing is fully in line with our plan and confirms that our investments are beginning to yield results.
- What is particularly encouraging is that Enrad's technology is now being adopted through several important routes to market, including leading contractors, ESCOs and building technology companies. The projects at Schiphol, Priva and Oranjestad demonstrate the relevance of our offering in the Dutch market, combining natural refrigerants, modular system design and combined heating and cooling.

About Enrad AB (publ)

Enrad is one of Europe's leading developers of cooling and heating systems using the natural refrigerant propane. Its energy solutions focus on three segments - comfort cooling, process cooling and heat pump solutions - serving grocery retail, data centers, multi-family housing and commercial properties. The company develops, manufactures and sells its products from its facility in Borås. Enrad AB has been listed on NGM Growth Market since 13 October 2025 under the ticker ENRAD, and is traded via banks and securities brokers. www.enrad.se
