

attana

Attana strengthens the operational team with four new employees, including a Chief Research Officer

Attana can today announce that the company, after a recruitment process with a high number of applicants, has recruited four new employees: a Chief Research Officer, two Application Specialists and a Service Technician. The new employees all have an international background and extensive experience from Big Pharma and biotech.

The two Application Specialists and the Service Technician have a wide experience from working with drug development and contract research. These three join Attana to strengthen the company's capacity and the company's offering in contract research and instrument sales. In addition, Attana has appointed a new role and recruited a Chief Research Officer with extensive experience from Big Pharma; most recently as a late-stage development specialist at one of the major pharmaceutical companies. Going forward, this person will be responsible for Attana's product development and to ensure that the commercial potential of the company's core technology is fully realized. The new employees join continuously during the spring and all are on site at Attana by the end of the summer.

CEO, Teodor Aastrup, comments:

"The fact that we have had so many qualified applicants is a sign that we are heading in the right direction and that there is great interest in us as a company. We have seen a potential to increase our capacity by adding more experience in the direct operations to meet the increasing demand for our products and services, and a strengthened team is therefore very timely. I am proud that we have succeeded in recruiting such well-qualified employees and these will complement our existing team very well."
