

Press release Smoltek Nanotech Holding AB (publ)

2025-11-20

This press release is an English version of the previously published Swedish version, which has interpretive precedence.

Smoltek launches podcast about materials technology and investments

Smoltek Nanotech Holding AB (publ) (“Smoltek” or “the Company”) launches the podcast SMOLtalk, which is about the company’s materials technology from a business and investor perspective. The target audience is anyone who wants to know more about how Smoltek’s materials technology breakthroughs enable new products, solve industrial problems and create financial value – the entire chain from lab to shareholder value. The format is conversations between CEO Magnus Andersson and invited guests who are researchers, entrepreneurs, industry experts or investors.

– We want to give our listeners insights into new technologies and market trends. At the same time, we want to provide a transparent insight into Smoltek's own journey and what it actually means to commercialize this type of technology, says Magnus Andersson, CEO of Smoltek.

The discussions will be with researchers, entrepreneurs and industry experts in widely different fields who are united by the fact that they solve important problems with the help of materials technology. There will also be interspersed with investors who will explain why they are interested in the sector and what they are looking for in the companies they invest in. In addition, there will be space for in-depth discussions on Smoltek's core competence - precision growth of carbon nanostructures - where the company's key people and partners will discuss concrete applications, future business areas and provide a transparent picture of how the work is progressing.

In the premiere episode, Smoltek's CTO, Dr. Farzan Ghavanini, is the guest. The conversation is about the technology and business opportunities with Smoltek Semi's ultra-thin capacitors, CNF-MIM.

– The conversation revolves around topics that Smoltek's shareholder community on Discord has suggested. It feels right to start there – with the questions that our owners actually want answers to, says Magnus Andersson.

Smoltek Nanotech Holding is a deeptech company that provides a technology that enables the production of conductive nanostructures on various materials. The company's nanostructure manufacturing technology can be used in several industrial sectors. Customers are found in the global process industry and semiconductors. The products that the company develops are used in equipment to produce fossil-free hydrogen and in semiconductors to further miniaturize microchips. The company protects its unique carbon nanotechnology through an extensive patent portfolio consisting of more than 120 patents, of which 97 are currently granted. Smoltek's share is listed on the Spotlight Stock Market under the ticker SMOL. Smoltek is a development company and forward-looking statements regarding time to market, production volume and price levels should be interpreted as forecasts and not commitments.
