

# Smoltek's CEO explains the company's financing strategy

*This press release is an English version of the previously published Swedish version, which has interpretive precedence.*

**Smoltek Nanotech Holding AB (publ) (“Smoltek” or “the Company”) today publishes an interview in which CEO Magnus Andersson explains the company's financing strategy and how the capital from the ongoing rights issue of approximately SEK 60 million is intended to be used. The interview was recorded by Finwire TV and is available on their YouTube channel.**

Smoltek sees strong demand for the products in development: ultra-thin capacitors for AI chips, data centers and other applications in the semiconductor sector, as well as porous transport electrodes for PEM electrolyzers in the hydrogen sector. The products, CNF-MIM (capacitors) and PTE (porous transport electrodes), are currently undergoing validation for industrialization in collaboration with leading manufacturers.

The company is also in discussions with industrial players about various types of licensing agreements. Such agreements can create future revenue streams and are an important part of the company's ambition to reach positive cash flow in 2027.

Smoltek Nanotech Holding is a public technology company that provides a technology that enables the production of conductive nanostructures on various materials. The company's technology multiplies the actual surface area for electrical and chemical processes and can be used in several industrial sectors. Customers are found in semiconductors and the global process industry. The products that the company develops are used as infrastructure components for stable power supply microchips and as electrodes and surface structures in equipment for the production and use of fossil-free hydrogen. The company protects its unique carbon nanotechnology through an extensive patent portfolio. Smoltek's share is listed on the Spotlight Stock Market under the ticker SMOL. Smoltek is a development company and forward-looking statements regarding time to market, production volume and price levels should be interpreted as forecasts and not commitments.
