

PRESS RELEASE

Hemcheck receives additional follow up order from its Greek distributor

Hemcheck Sweden AB has received an additional follow-up order from its Greek distributor Antisel. The order is of lower economic value, but shows again that Antisel is active in the market and that Greek customers demand Hemcheck's products.

- We are happy about the interest in Hemcheck's products, not only in Greece but in several other markets where we have good momentum, and we of course hope that this order will be followed by more and bigger orders, says Joen Averstad, CEO of Hemcheck.

About Hemcheck

Hemcheck Sweden AB, founded in 2010, produces and commercializes a patented CE-marked concept for point of care hemolysis detection. The concept consists of disposable tests as well as readers that can very quickly, directly upon sampling, identify hemolysed blood samples in vacuum tubes and blood gas syringes. Hemolysis, ruptured red blood cells, is the most common reason globally why blood samples cannot be analyzed accurately and is also a biomarker for acute medical conditions. Hemcheck's goal is to contribute to improved healthcare by offering user-friendly solutions for the detection of hemolysed blood samples in direct connection with blood sampling near the patient. By doing so, Hemcheck can contribute to increased patient safety, more efficient processes and lower costs. The company is listed on the Nasdaq First North Growth Market.

FNCA Sweden AB, 08-528 00 399, [info@fnca](mailto:info@fnca.se), is the Certified Adviser to the company.
