

Prostatype® P-score and prognostic evaluation in Prostate cancer to be presented at the largest Urology meeting in the world

-Results of the study from Skåne University Hospital selected to present during American Urology Congress 2021

The American Urology Association congress 2021 is the largest and most important gathering of Urologists in the world, and Prostatype Genomics is very proud to share that one of our P-score clinical validation studies has been selected for presentation at the congress.

Lidi Xu, Chief Technology Officer at Prostatype Genomics comments “We are very happy to have received this nomination; over- and under- treatment of prostate cancer patients is common, and a significant problem for healthcare in general, but most of all for the patients. To present and discuss Prostatype® and the P-score in front of the world’s leading urologists is a great opportunity to help optimize prostate cancer risk assessment”.

Study from Skåne University Hospital

The study “*P-score based on three embryonic stem cell genes improves prognostic evaluation for metastasis and death in prostate cancer - a retrospective validation study*” comprised a cohort of 716 patients diagnosed with PCa using core needle biopsy from January 2008 to December 2010 at Skåne University hospital with a follow-up time 8-10 years after diagnosis. This is the first time to present the study results based on the ISUP grading system. P-score has shown significantly better prediction performance for prostate cancer-specific death and metastasis than EAU risk classification. In total, 30% of patients were reclassified to lower risk groups while 4% of patients to higher risk groups as compared to the EAU risk classification, implying a treatment decision change.

Fredrik Persson, CEO of Prostatype Genomics, comments; “We are very proud about this recognition, being selected by leading experts to present in front of the top urologists in the world is a fantastic opportunity, and a confirmation regarding the potential of the Prostatype® test. This is also a great opportunity to make the American market aware of Prostatype Genomics and what we can offer.”

About Prostatype® and the P-score

Prostatype Genomics P-score is an algorithm containing 3-genes signature and three clinical parameters. By combining traditional clinical risk factors with prognostic biomarkers derived from the original prostate biopsy the Prostatype® test system offer a P-score, greatly improving prognostic evaluation, providing important input in the treatment assessment.
