

# INZILE

## Inzile increases the production rate for 2021

Inzile will already during the fourth quarter of this year be able to reach a production rate of 1000 vehicles per year. This presumes that required materials and components are in stock. According to the company's original plans, this production rate would not be reached until 2022.

- Our temporary lack of components is frustrating, but the good news is that our production is already able to produce at a rate of 1000 per year, provided that materials and components are in stock. Further it is gratifying that the customers who have received delivery of our vehicles are very satisfied with the opportunities the vehicle provides, i.e. the concept works well, comments Ragnar Åhgren, CEO of Inzile.

- We are responsive to comments from our customers and we have received suggestions for improvements that increase the vehicle's performance. Due to the delayed component deliveries from subcontractors we intend to take the opportunity to introduce some modifications based on customer requirements, concludes Ragnar Åhgren.

Inzile Pro4 is an electric light truck that has been developed with the aim of creating conditions for smart and fossil-free cities. Electric Utility Vehicle (EUV) is a niche segment in the automotive industry that is expected to grow rapidly in the coming years. The customer groups include real estate companies, transport companies and e-retailers that want to eliminate emissions in the cities, as well as municipalities and park administrations.
