

Press release September 18, 2018

Genovis launches FabRICATOR®-HPLC for automated antibody analysis

Today Genovis is initiating sales of the FabRICATOR-HPLC column for quality assessment of antibodies in automated analytical systems. The product is based on Genovis' FabRICATOR technology and can be used in existing analytical systems for rapid online analysis without manual sample handling.

FabRICATOR HPLC is a column that enables automated analysis of therapeutic antibodies during development, production and formulation of antibody-based drugs. The product can be used in existing analytical systems on the market, which means that customers do not need to invest in additional hardware.

“As FabRICATOR has become increasingly established on the antibody analysis market, we have perceived a need to further simplify and automate sample handling for our customers. FabRICATOR®-HPLC is an enzyme reactor that gives our customers new opportunities to transfer their existing methods using our enzymes onto fully automated instruments thereby reducing operator time, sample handling and increasing throughput,” says Fredrik Olsson, CEO.

FabRICATOR®-HPLC is the second product that Genovis has launched this year. Earlier in April the company launched GlycOCATCH™, a new technology for purification of glycosylated proteins.
