

## Zivid and INFAIMON expands 3D vision availability with a multinational partnership

InPicker now available with Zivid One 3D cameras

**OSLO, Norway, August 21, 2018** -- Zivid, the leader in 3D vision for Industry 4.0 and robot automation, has signed an agreement with INFAIMON for sales and technical implementation of Zivid One 3D vision cameras. INFAIMON is a multinational company dedicated exclusively to artificial vision and image analysis technology with principal offices in Spain, Portugal, Mexico, and Brazil.

"INFAIMON is excited to introduce Zivid One 3D cameras to our industrial imaging solutions," said Salvador Giro, CEO of INFAIMON. "We have worked with vision solutions the last 25 years, and the quality of data required in today's growing vision-guided robotics is only made possible with Zivid One from Zivid."

INFAIMON uses the most advanced components and vision systems in the market and works with the most prestigious manufacturers worldwide. The InPicker solution uses Vision Guided Robotics (VGR) for collecting, evaluating, and identifying object data, and picking and placing components in automotive, pharmaceutical, logistics and e-commerce applications.

"Companies automating their production lines and warehouses introducing robots for automation need 3D eyes like Zivid One," said Henrik Schumann-Olsen, CEO of Zivid. "INFAIMON has unique 3D vision expertise and a track record of quickly identifying, solving, and implementing solutions for our customers. With our partnership with INFAIMON, we can solidify and accelerate growth in Industry 4.0 markets."

### Availability

Zivid One 3D color cameras are available in Spain, Portugal, Brazil and Mexico via INFAIMON, or directly from [sales@zivid.com](mailto:sales@zivid.com) for all other regions. More information is available at [www.zivid.com](http://www.zivid.com).

Zivid is the leading provider of 3D cameras and software solutions for automated machine and computer vision applications. Adaptive industrial robots, automated warehouses, and production lines need human-like vision, and by using the award-winning Zivid One 3D camera to extract micrometer details and color info in real-time, robots can finally monitor, move, and act according to target objects.

With more than 60 years of in-house experience within optical sensors and 3D machine vision, Zivid enables new and existing applications to be automated, and customers to improve time and cost in areas like quality control, bin-picking, logistics, and inspection. Zivid One is the ultimate set of eyes for Industry 4.0 and warehousing applications.

Zivid One has received numerous awards for its technical features, quality of data (QOD), and design implementation. Awards include "Top Innovation Award" by inVISION Magazine, "Gold Innovators Award" by Vision System's & Design, Red Dot's "Product Design" award, and the Research Council of Norway's prestigious "Innovation Award."
