

Nederman receives five orders in the Americas with a total value of SEK 129 million.

Nederman has received a set of three orders for air filtration systems in the metal recycling segment. The orders have a total value of SEK 71 million.

The solutions from Nederman include three multi-module dust collection systems with associated ancillary equipment and controls.

The orders were booked in the third quarter of 2015 and delivery of the systems will be completed in the fourth quarter of 2016.

In addition, Nederman has received an order from major global mining leader in Canada. The order has a value of SEK 32 million and will provide emissions control equipment for a smelting and refining process.

The customer's primary objective is to achieve new and significantly reduced total particulate and acid gas emissions from various mining and refining processes to meet stringent new provincial requirements. Nederman MikroPul's Long bag pulse jet collector will be the primary control device with associated ancillary components and equipment for support, access, material handling, control and monitoring.

The order was booked in the third quarter of 2015 and delivery of the systems will be completed in the second quarter of 2016.

In addition, Nederman has also received an order for two complete gas turbine inlet air filtration systems to be used for electric power generation in the USA. The order has a value of SEK 26 million.

The Nederman solutions for the electric power facilities include pulse jet self-cleaning cartridge filter systems and evaporative coolers. Both systems will reduce ambient outdoor dust to a level sufficient to protect the turbine compressor and internal components.

The order was booked in the third quarter of 2015 and deliveries are scheduled for the fourth quarter of 2016.
