## **Integrum CE marks Neuromotus™ – a novel system for phantom limb pain treatment**

Integrum has CE marked Neuromotus™, a novel system which employs virtual and augmented reality along with artificial intelligence algorithms for the treatment of phantom limb pain.

Phantom limb pain (PLP) is a deteriorating condition for which there has been no effective treatment. The prevalence of PLP among amputees is reported to be between 42-80%. Patients suffering from PLP have historically been neglected, mostly because of the lack of an effective treatment, and the poor understanding of the condition. These patients are often left to be permanently medicated with all the downsides of using strong pain killers or resigned to a life with chronic pain.

Neuromotus™ provides a solution for people suffering phantom limb pain. A recently published study in the Lancet (the top ranked European scientific journal) showed that our product is an effective option even for patients where all other treatments have failed. Patients who had suffered of chronic phantom limb pain for decades without any effective treatment option were relieved from their constant pain and reduced their dependency on pain medications after using our product. These improvements were still observable 6 months after treatment which is of great importance for the clinical relevance for treatments of chronic conditions.

Integrum is currently present at the health care conference, Vitalis 2019, held 21-23<sup>rd</sup> May 2019 at Svenska Mässan, Gothenburg, to demonstrate the system. Dr. Max Ortiz Catalan will speak about the scientific background and clinical findings with this technology in the same conference on 22<sup>nd</sup> May at 2 pm.

” Neuromotus™ echoes with Integrum’s commitment to improving life for people with amputation. We are glad to know that our product can help people around the world suffering from phantom limb pain and will enable them to have a better life. I am happy to see that we already have orders from several clinics and research centers in Europe”, says María López, CEO at Integrum.
