New Center for Bionics and Pain Research; CBPR, established in Gothenburg

Integrum AB would like to offer its warmest congratulations to Dr. Max Ortiz Catalán (former Head of R&D at Integrum), Chalmers University of Technology, and Sahlgrenska University Hospital for the establishment of the CBPR Center.

The interdisciplinary research center has been established to promote the further development and clinical implementation of novel technologies to treat sensory and motor impairments, such as amputations or nerve injuries. Thanks to generous donations, the Center for Bionics and Pain Research (CBPR) will help patients regain quality of life through world-leading technologies and treatments, developed by engineering and medical professionals working closely together.

While the establishment has been made possible through collaboration of many parties, Integrum AB is quite pleased to see that its OPRA™ Implant System, e-OPRA™ Implant System, Neuromotus™ and related technologies, will play an integral role in the future of the CBPR and the further development of groundbreaking amputee care.

About Integrum

Integrum AB is a publicly-traded company (INTEG B: Nasdaq First North exchange) based outside of Gothenburg, Sweden, with a US subsidiary in San Francisco, CA. Since 1990, osseointegration, the science behind the OPRA™ Implant System, has been helping individuals with amputations enjoy a dramatically improved quality of life. Thorough surgical experience gained over more than three decades, from 500 surgeries, in 14 countries, has led to the development of Integrum's system for bone-anchored prostheses – a vastly superior alternative to the traditionally used socket prosthesis.

The OPRA™ Implant System is the only FDA approved medical device for above knee, bone-anchored prosthetics available in the US. More information on the company and its innovative solutions for amputees can be found at www.integrum.se.
