

## Aibel consortium wins major contract within offshore wind

**The grid operator TenneT has awarded a major contract to an Aibel/Keppel consortium for the supply of the HVDC\* platform and onshore converter station of the offshore grid connection project DoIWin5. ABB will supply the complete HVDC\* electrical power system. The order value that is not public is one of Aibel's largest won contracts so far.**

Aibel's scope within the consortium, in which they own 50%, is the engineering and procurement while Keppel's yard in Singapore will be constructing the converter platform. Aibel will also install ABB's HVDC conversion equipment, including commissioning, transport and installation of the complete converter platform offshore.

DoIWin5 will be installed in the DoIWin cluster on the German sector of the North Sea, where the other three DoIWin platforms are operating. Among them is DoIWin beta, Aibel's first wind platform delivered in 2015. DoIWin5 is estimated to be ready for delivery to the customer during year 2024.

"It is very gratifying that Aibel has been awarded this large and important contract, a proof that the company strengthens its position as a supplier in the offshore wind segment", says Ratos's CEO Jonas Wiström.

\* HVDC (high-voltage direct current) is a highly efficient alternative for transmitting large amounts of electricity over long distances.
