INVISIO launches the first headset that performs in all mission scenarios

INVISIO today launches a new innovative over-the-ear headset – the INVISIO T7. The tactical communication headset sets new standards for submersibility, ruggedness, flexibility, and comfort while combining industry-leading hearing protection with situational awareness.

INVISIO has for many years led the market in advanced in-ear hearing protection headsets with situational awareness. The T7 headset extends that leadership to over-the-ear devices, combining the best of INVISIO's capabilities in tactical communication headsets.

Designed for military and public safety professionals on critical missions, the T7 headset is lightweight, submersible, robust and offers three interchangeable wearing styles. When used with INVISIO control units, the T7 provides market-leading hearing protection, state-of-the-art situational awareness and clear communication in all environments.

“We have developed the INVISIO T7 in close cooperation with several special forces units, which routinely operate in the most challenging conditions,” says Jeroen Berns, Senior Product Manager Headsets, INVISIO.

The INVISIO T7 headset brings several new, unique features to the over-the-ear headset market:

Submersible and rugged

- Operational at altitudes of 12,000+ meters down to 10 meters of submersion.

Next level flexibility

- Available in three different and interchangeable wearing styles with no tools needed when changing.

All-day comfort

- Lightweight at less than 350 grams and with a choice of three different ear cushions, including a new, patent-pending ergonomically shaped 3D cushion.

INVISIO Audio™

- Industry-leading hearing protection with clear communication in extreme noise levels and unparalleled situational awareness.

“Safety, comfort and versatility has really improved with the INVISIO T7’s three patent-pending features,” says Jeroen Berns.

“We have developed a new speaker system with submersion capabilities to 10 meters, 3D ear cushions ergonomically shaped to fit the human head for improved comfort, and hear-thru microphone drainage to ensure immediate situational awareness after submersion.”

From inception, the INVISIO T7 headset was designed and optimized to meet or exceed the rigorous 810G military standard. It is thus able to operate during extreme temperature changes or in highly corrosive environments.

The new INVISIO T7 completes and significantly strengthens the INVISIO product portfolio of tactical headsets, encompassing a dive headset, dual in-ear headsets and over-the ear headsets.
