

OZALIN® continues to receive marketing authorization approvals across EU

Zug, 2nd March 2020, Swiss company Primex Pharmaceuticals announces it has received international approval of the repeat use procedure for OZALIN® (ADV6209) involving the following 8 countries: Germany, Austria, Spain, Portugal, Ireland, Belgium, Greece, and Poland.

This follows the decentralized regulatory approval and marketing authorization approval in France, UK, Italy, Netherlands, Finland, Norway, and Denmark at the end of 2018 for children from 6 months to 17 years for moderate sedation before therapeutic or diagnostic procedures, and as premedication prior to anaesthesia. OZALIN is commercialized in the above countries.

Alan Knox, CEO of Primex, comments: "This is another milestone for Primex in paediatric anaesthesia. This will allow us to expand the availability of OZALIN across Europe. Initially developed by Amiens Hospital in France, very few companies are developing medicines in paediatric anaesthesia, and we are happy to offer a palatable oral solution developed by clinicians for children's needs. The sales potential is over 100 million euros in Europe alone, but more importantly, we can really make a difference here."
