

OssDsign increases operational efficiency and reduces Cranial PSI lead time by up to 40 percent

Uppsala, 20 March 2023. OssDsign AB (publ.) announces today that the company has significantly reduced Cranial PSI lead times up to 40 percent through optimizations in the manufacturing process. By delivering on this important milestone, OssDsign enhances the offering and substantially improve the product's competitiveness and growth potential.

In line with OssDsign's strategy ASCENT25, the company delivers on the strategic priority of operational efficiency by significantly improving the OssDsign Cranial PSI manufacturing process. Moving forward, the reduction in lead times will allow for deliveries within three weeks for all OssDsign Cranial PSI orders and across all geographies – an important milestone that will increase relevance for more cases.

"Lead time optimization has been an important focus for OssDsign during the last 12 months and this major step will increase the competitiveness of OssDsign Cranial PSI. Whilst we will continue to work diligently on operational efficiency going forward, the new lead time will improve our ability to further accelerate growth, especially in the U.S.," said Morten Henneveld, CEO, OssDsign.

OssDsign Cranial PSI is a patient-specific cranial implant made from 3D printed medical-grade titanium covered by a regenerative calcium phosphate composition. While the titanium skeleton reinforces the implant and resists physical and mechanical stress, the unique calcium phosphate composition provides healing and regenerative properties, allowing regrowth of the patient's own bone. Over time, the calcium phosphate composition degrades and is replaced with bone, leaving the patient with a well-integrated implant, potentially lasting a lifetime.
