

OssDsign reaches commercial milestone of 750 implants sold in Germany

Uppsala, April 27, 2023. OssDsign AB (publ.) today announces that the company has reached the commercial milestone of 750 implants sold in Germany since market entry, with a significant acceleration in sales during the last two years.

Germany is one of the most important markets in Europe and, in recent years, OssDsign has considerably increased its sales efforts in Germany, resulting in a significant acceleration in sales. In addition to this, the company has successfully delivered on its strategic priority to increase operational efficiency and reduce lead time for OssDsign Cranial PSI.

"It is evident and very rewarding that our strategic changes have considerably accelerated the sales growth in Germany, resulting in this great achievement. Our recent optimizations in manufacturing that reduces the lead time of OssDsign Cranial PSI will further strengthen our product offering and help accelerate growth going forward," said Morten Henneveld, CEO, OssDsign.

OssDsign Cranial PSI is a patient-specific cranial implant made from 3D printed medical-grade titanium covered by a regenerative calcium phosphate composition. While the titanium skeleton reinforces the implant and resists physical and mechanical stress, the unique calcium phosphate composition provides healing and regenerative properties, allowing regrowth of the patient's own bone. Over time, the calcium phosphate composition degrades and is replaced with bone, leaving the patient with a well-integrated implant, potentially lasting a lifetime.
