

## Stena Line enhances partnership with Nowhere Networks

Stena Line has been using Nowhere Networks' land-based network on 32 ships since 2021. It has now chosen Nowhere Networks as its sole connectivity provider, managing all internet communication for its entire fleet. The solution includes high-speed internet with full coverage, SD-WAN, traffic control and optimization, a portal, payment solution, single point of contact, and 24/7/365 NOC.

“We are proud to have earned the trust of Stena Line. We’ve started rolling out our solution and aim to be ready before the high season. Stena Line’s high demands on itself as well as on us creates a dynamic environment for a smooth and successful implementation,” says Asbjörn Frydenlund, CEO of Nowhere Networks.

“Nowhere Networks has consistently delivered excellent service, leading us to select it as the primary connectivity supplier for our ships,” says Rikard Karlsson, Head of Vessel Technology & Connectivity at Stena Line AB. “The solution offers higher capacity, bandwidth, and quality at significantly lower cost, making the project a great success despite a tight schedule.”

### Stena Line

[Stena Line](#) is one of the largest ferry operators with a fleet that carries out more than 33,000 yearly sailings. Employing over 6,100 staff of nearly 40 nationalities, it operates 40 vessels on 20 routes across seven regions. Stena Line aims to connect Europe sustainably, offering affordable, reliable and safe transportation with a focus on reducing environmental impact. Its core values of care for customers, resources, and each other guide its operations and committed employees.

### Nowhere Networks

[Nowhere Networks](#) is a leading, rapidly expanding high-tech company specializing in cost-effective internet broadband solutions for the shipping industry. It builds networks for high-speed internet globally and currently operates the largest radio-based broadband network for the maritime industry. The core business concept of Nowhere Networks is to provide internet connections of higher speed and quality to vessels at a significantly lower cost compared to other solutions available in the market. Additionally, Nowhere Networks offers supplementary services such as SD-WAN, Traffic Management and Optimization, Portal, and Payment Solution. Therefore, Nowhere Networks stands out as one of the most unique and comprehensive connectivity providers for the maritime industry worldwide.

### **About Nowhere Networks**

Nowhere Networks is a fast-growing Swedish technology company and the world's largest provider of land-based internet connectivity for the maritime industry within our niche. With over 25 satisfied customers and a fleet of 150 connected vessels—including cruise ships and passenger ferries—we deliver a complete, all-inclusive subscription-based solution that includes both hardware and software.

Our service is more cost-effective than any comparable alternative, delivering high-speed, low-latency internet through our own purpose-built, high-capacity network. Developed and produced entirely in Sweden, our system combines intelligent onboard software, 24/7/365 NOC support, and seamless hybrid integration with technologies like LEO and LTE.

Clients such as Tallink, DFDS, Irish Ferries, and Destination Gotland trust Nowhere Networks for their critical connectivity. With us, ships stay connected and competitive.
