## Saab and Raytheon to Demonstrate new Carl-Gustaf Munition for the U.S. Army

Saab has, in collaboration with Raytheon, received a contract from the U.S. Army to demonstrate a guided munition for the Carl-Gustaf® system, with three all-up-round test firings against threat-representative targets.

In 2017, Saab announced its partnership with Raytheon to develop new weapons for infantry forces. The new munition answers a U.S. Special Operations Command requirement and is designed to increase the capability of the combat proven, shoulder-launched, multi-role weapon system Carl-Gustaf built by Saab. The new munition is guided which will provide for increased precision against moving targets.

"Collaborating with Raytheon, utilizing their technical and product excellence in combination with our innovative technology solutions, will enhance the already world-leading Carl-Gustaf and AT4 weapon systems with additional capabilities that will further increase the operational benefit for the end user", says Görgen Johansson, Senior Vice President and Head of Saab business area Dynamics.

"Paired with the Carl-Gustaf weapon system, this new guided munition will give U.S. and coalition dismounted forces additional overmatch capabilities against enemy threats on the battlefield", says Kim Ernzen, Raytheon Land Warfare Systems vice president. "The munition is intended to enable ground troops to engage multiple targets precisely at distances up to 2,000 meters, including moving targets".

The munition's advanced warhead is designed to penetrate light armor, bunkers and concrete structures while decreasing collateral damage. With increased range, the new munition will offer greater protection for ground troops by enabling them to fire at targets from inside structures or buildings.
