Nordlo launches NordloGPT – bringing together leading AI models in one service

Nordlo is now launching a secure AI service that brings together several of the market's leading language models in a single platform.

“This is how AI should be used to build real added value that saves time and money and develops the company's knowledge transfer,” says Magnus Blomberg, CTO at Nordlo.

NordloGPT brings together AI models such as OpenAI, Claude and Gemini. Many companies invest heavily in AI, but this is rarely done within a single structure or platform.

“By allowing employees to use different models within the same platform, knowledge is accumulated. This gives businesses a unique, cost-effective space that harnesses all the knowledge and documentation built up within the organisation.”

“Another major advantage is the ability to create unique agents, for example for sales or finance, which can then be shared with the entire company.”

Since the platform interacts with multiple AI models, the company has access to all of them without having to sign up for individual subscriptions. It also provides quick access to new functionality without the need for development or customisation.

Magnus Blomberg, CTO at Nordlo.

“In addition, NordloGPT gives management oversight of how AI is used within the organisation.”

Security crucial in development

NordloGPT runs in Nordlo's private cloud and is designed to meet organisations' highest requirements for data integrity and traceability.

“Governance and risk management are two neglected areas in the use of AI. As employees make greater use of AI models, it is important that companies have control over sensitive data and do not share it with external parties.”

The service is designed for organisations with more than 20 employees but can be adapted for smaller businesses. The first customers will start using NordloGPT in December.

“At Nordlo, we have been using NordloGPT internally since the beginning of 2025 in areas such as sales, marketing, support, training and cyber security. We clearly see the added value, especially when it comes to quickly building agents and solutions that the company can use collectively,” says Magnus Blomberg, CTO at Nordlo.
