

## Adapteo sets 2030 targets to produce buildings in a climate-neutral manner with 100% sustainable materials

Adapteo, the leading adaptable space partner in Northern Europe, has presented its new sustainability targets. The targets reflect Adapteo's commitment to become the sustainable choice for businesses who need adaptable buildings with a minimal environmental impact, and that enable a more inclusive society.

Adapteo launched a new sustainability strategy during fall 2020, with the overall business objective of becoming one of the most sustainable companies in the industry. To support and showcase the company's dedication to the sustainability strategy, Adapteo now sets new 2030 targets, by committing to use 100 percent sustainable materials by 2030, producing the buildings in a climate neutral manner and using fossil free transports, within the same time frame.

Adapteo is also committing to continuously expand its circular flows by 2030. This for example, means, developing a model that enables reuse of building units that no longer meet the quality requirements for use in ordinary operations. When it comes to climate emissions, Adapteo aims for fossil free transports and to reduce its emissions by 50 percent by 2030, which is the level set for the construction industry by the national initiative Fossil Free Sweden.

"Adapteo wants to be a part of the solution to the major sustainability challenges that currently exist in the construction and real estate industry. Our buildings already have a high proportion of sustainable materials, but we want to be at the front line in the complete phasing out of building materials that are not sustainable," says Hanna Wennberg, Senior Vice President, Sustainability at Adapteo.

Another sustainability aspect of Adapteo's activities is to be an active partner in creating more inclusive societies by being able to quickly meet the changing local needs of the public sector, for example day cares, schools, and nursing homes, as well as partnering with organisations with societal development.

As an employer, inclusion is also an important part of Adapteo's sustainability goals. The company strives for a diverse workforce among employees and in management.

### Adapteo's Sustainability Targets:

- 100% sustainable materials by 2030
- A climate-neutral production and fossil-free transports by 2030
- Continuous expansion of circular flows until 2030
- Enabling our users to halve carbon emissions from our solutions by 2030
- Adapteo aims for an inclusive workplace and leadership, with equal age and gender balance and equal rights and opportunities for all
- Adapteo will be an active partner in shaping sustainable societies

### Adapteo in brief

Adapteo is the leading adaptable space partner in Northern Europe. We develop, build, rent out and sell adaptable buildings for schools, daycares, care centres, offices, and accommodation. With our modular and circular building solutions, our customers can transform, repurpose, scale up and scale down based on their changing needs. That is how we build adaptable and sustainable societies. Adapteo has a building portfolio of 1.3 million square metres and operates in Sweden, Finland, Norway, Denmark,

Germany, Belgium, the Netherlands and Lithuania. A majority of our revenues is generated by rental contracts from the public sector.
