

Carbiotix signs NutraCycle agreement with top 10 global wine producer

Carbiotix AB (publ) ("Carbiotix" or "the Company") announces today that the Company has signed a NutraCycle Joint Commercial Development Agreement (JCDA) with a top 10 global wine producer. The JCDA will start in Q4 2025 and continue over a 6-month period and follows the successful completion of a laboratory pre-study project on grape pomace during 2025. The value of the JCDA is 19,500 USD and will include formulation verification with one or several Food & Beverage Consumer Packaged Goods (F&B CPG) companies and engineering specification / investment case development. At the conclusion of the JCDA, a decision will be made to construct a NutraCycle process through a multi-party license and operator agreement. This JCDA is one of several potential agreements that the Company communicated will start in H2 2025.

Erik Deaner, CEO of Carbiotix, comments:

"I am thrilled to announce that we have signed a JCDA with one of the top 10 global wine producers. This agreement validates that a leading global player in the F&B space, generating large amounts of hemicellulose side-streams currently sold as animal feed, is interested in the NutraCycle onsite upcycling and fortification concept and its potential to improve their bottom line. This JCDA slated to start in Q4 2025 will be carried out over a 6-month period and will include formulation verification with one or several F&B CPG companies and engineering specification / investment case development. At the conclusion of the JCDA, a decision will be made to construct a NutraCycle process through a multi-party license and operator agreement.

The customer in question will pay 19,500 USD for the entire project, further demonstrating Carbiotix commitment to cost-effectively developing upcycling and fortification opportunities between side-stream owners and F&B CPG companies. I look forward to starting this JCDA project and quickly moving forward to the stage of making a decision on constructing a NutraCycle process and allowing the customer in question to capture more value from their side-stream as a complementary fortification extract and help create healthier, more profitable and sustainable processed F&B products."

Forward-looking statements

This communication contains forward-looking statements, consisting of subjective assumptions and forecasts for future scenarios. Predictions for the future only apply as of the date they are made and are, by their nature, as is research and development work in the biotechnology segment, associated with risk and uncertainty. With this in mind, the actual outcome may deviate significantly from the scenarios as described in this press release.

This is information that Carbiotix AB is obliged to make public according to the EU Market Abuse Regulation (MAR). The information was made publicly available by the Company's contact person set out below on 04 October 2025.
